

Create an enterprise PPM solution in less than a month

Establish effective project oversight and control

Keep management and clients better informed

Implement best practices in process and project management

Take the first step towards integrated Project Portfolio, Resource, Financial and Demand Management

Start the engine – create your project repository

No business today, no matter how large or small, can afford to invest in non-performing or non-strategic projects .

The first step is to gather all your in-flight project information. Then establish a systematic and structured approach to improve access to this information. This will support your ongoing investment decisions.

Changepoint's market-leading project portfolio management (PPM) solution will provide the framework for assessing the health of your key initiatives throughout the project lifecycle.

Running smoothly – maximize your investments and resources

Use your detailed project portfolio information to effectively manage existing resources, make sound investment decisions, and control risks and costs. Incorporate tracking of both tactical and strategic initiatives and ensure resources are optimized to deliver the highest value.

Put your foot down - integrated business processes

You can optionally implement additional modules at a pace to suit you, at no extra cost for the software.

Changepoint PPM has the capability to automate and integrate a number of core business processes including:

- Investment planning
- Client relationship management
- Integrated request tracking
- Project management
- Resource management
- Application management
- Time and cost tracking
- Knowledge management

What information can we track?

Once you have established your project repository, you can build meaningful project intelligence, including:

- Defining the project deadlines
- Identifying the project sponsor, stakeholders and Resources
- Clarifying financial commitments
- Identifying project objectives, dependencies and Impacts.
- Managing a work breakdown structure
- Tracking actions, risks and issues

Keeping it simple

- We can have the system live, configured, and train you in under 30 days
- Quickly import your existing MSP plans
- You pay a flat monthly fee per user starting from the equivalent cost of one cup of coffee per day
- We take care of administration, infrastructure, maintenance, and upgrades
- All you need is a web browser and internet connection
