FROM START TO FINISH

Project Management in Daptiv PPM

Project transparency and management for all your initiatives

Business Challenge

• Project Managers need to ensure on-time, on-budget, project delivery every time, yet variables exist in execution from project to project.

• Organizations may want a consistent method for reporting initiatives’ progress, while different project teams each have a different way of reporting status.

• Changes are bound to occur, yet many organizations have no set agreement or understanding of how to escalate risks and issues that arise.

• The overhead for managing and reporting projects can exceed the effort being performed on the projects themselves.

Solution

Get an end-to-end process for managing the project lifecycle. With a holistic and integrated approach, manage multiple types of projects – from Waterfall to Agile and everything in between. Manage initiatives from start to finish and control project progress, resources, risks, financials, scope, and quality. Manage all project data, including task lists, resources, change requests, and more. Track tasks, documents, calendars, discussions, and polls within the context of each project to keep everyone who touches the project on the same page. Attach related items to specific tasks, and track document versions and responses to manage historical data. Customize project summaries for an at-a-glance look at project components. Quickly assess and manage tasks, resources, and risks – all in one place.

Product Description

Daptiv PPM provides an efficient way to both plan projects and execute against them using collaborative tools that help teams stay on task. Daptiv PPM provides governance around and visibility into multiple execution methodologies – acting as a “single source of truth” for all project execution data. Configurable dashboards and project reporting makes communicating to stakeholders easier and more consumable. Key features of Daptiv PPM include a tabbed applications interface, dynamic applications, ability to link related items from different applications, and workgroups for managing teams and workspaces.

Key Features

• Connect to other enterprise applications
• Project templates, like work breakdown structures
• Multiple configurable workspace types and dynamic applications
• Timeline views across projects, programs, and clients.
• Milestone Summaries and planned vs. actual summaries.
• Dynamic Project Gantt charts.
• Team member calendars.

Benefits

• Simple-to-use single source of project-related information.
• Increased predictability of project execution for more on-time, on-budget project delivery.
• Reduced effort in project planning, status updates and reporting.
• Flexibility to manage project execution with the process that fits project team needs.
• Increased communication between project manager and project team members.
• Ability to anticipate project barriers before they impact project cost.
Your projects delivered your way.

Honeywell’s Specialty Materials unit needed a versatile PPM solution powerful enough to handle diverse projects spanning the globe. “Daptiv is flexible in that it can be used for many types and kinds of projects, and across all levels of management including managers, project leaders and team members at Honeywell. One of its best features is its simplicity, ease of navigation and short learning curve. This eases user adoption, as oftentimes it requires little or no training. We needed a system that could manage multiple projects for our business units that are spread throughout the globe. Ease of use and high user adoption is the key to its success.”

---

Project Planning

Don’t start from scratch. Manage all project data, including task lists, resources, change requests, and more.

- Apply pre-defined templates as needed and make adjustments in the project profile
- Manage and edit timeline data using Gantt charts
- Bi-directional integration with Microsoft Project enables teams to import data to set up projects correctly.

---

Project Collaboration

Keep everyone on the same page.

- Track tasks, documents, calendars, discussions, and polls within the context of each project.
- Agile, hybrid or iterative project teams with varying approaches to execution and measuring progress can have a consistent method of reporting status.
- Track document versions and responses.
- Effectively communicate stakeholder expectations, as well as project velocity, constraints, issues, and risks.

---

Project Summaries & History

All the information in one place.

- Customize project summaries for an at-a-glance look at project components.
- Quickly assess and manage tasks, resources, and risks.
- Access historical data to monitor project progression and answer whether execution is on track.
- Gain an organized approach to managing projects, programs, and operations in a way that is transparent and predictable.
